High possibilities in a compact size

The Khepera IV is the perfect platform for the indoor research with a single robot or in swarm in a limited space such as a Lab floor or a table top. Highly modular, it accepts various options to adapt the robot to your application.

The Khepera IV comes with many features in a compact size as never seen before. The robot includes many sensors, one color camera, an accelerometer, a gyroscope, WiFi, Bluetooth connectivity and a powerful open source system runnning on Linux. All those features comes in a diameter of only 140mm.

Faster and more accurate, the Khepera IV robot offers high end capabilities at a very competitive price.
