

Super educational pack K-JUNIOR

MOBILE ROBOTICS

Overview of the interactive CD-ROM

The Multimedia Teaching Environment gives you an interactive environment for your robotic course. The interactive environment will show you how to work with the K-Junior and how the K-Junior works.

You can disassemble virtually the K-Junior and by clicking on each part, you can see how it works.

All the components and features of the K-Junior are described in the interactive environment

You can navigate on a virtual K-Junior. By highlighting the components with your mouse you will get a complete explanation of how it works.

Different exploded views show you the parts constituting the K-Junior

This block diagram shows you how the K-Junior works electrically in a simple and clear view.

The package contains :

2 x K-JuniorV2

The K-JuniorV2 robot can : avoid obstacles, follow a line, draw or sing a song, autonomously or remotely. And many more applications with the options included in the pack !

LCD Display

This LCD screen with keypad provides an user interface to build an interactive control program with your robot without a PC. You can display messages and manage small menus.

Linear camera

This Linear camera can read a line of 102 pixels in 256 levels of gray. With this turret, the K-Junior can detect tags or target.

Ultrasonic sensor

This sensor provides a much longer detection range than the default K-Junior infrared sensors. The maximum distance for object detection is up to 6 meters.

General IO

The General I/O allows interfacing your own electronics. It is a perfect tool to implement your own module directly on the K-Junior.

All the needed accessories

An interactive CD-ROM is included in the pack. All the needed accessories are also included such as an IR remote, the programming software, a Charger, a bluetooth dongle for your computer, a pen for drawing, a black tape for line following and all the documentation.

Option available

In option, the K-Junior Gripper allows you to pick up objects and interact with them, opening a large range of new applications. (not included with the Super educational pack)
