

Super educational pack K-JUNIOR

MOBILE ROBOTICS

The interactive and playful teaching method

The robotics is the perfect way to introduce students to different aspects of the science and the technology. Using various disciplines such as electronics, mechanics, physics and programming, the robotics is a playful and concrete way to teach students what those disciplines merged together can do.

The Super educational pack is a complete set dedicated to make a course on the robotics based on the K-Junior robot. It includes two robots and all the options needed for your course. A interactive 3D CD-ROM completes this pack showing how the robot is made, works and how it can be used.
